Front-End Web Development Activities

1. **Download and Install Visual Studio Code:**
   - Visit the official Visual Studio Code website.
   - Download the installer suitable for your operating system (Windows, macOS, or Linux).
   - Run the installer and follow the on-screen instructions to install Visual Studio Code on your computer.

2. **Explore Visual Studio Code Features:**
   - Open Visual Studio Code.
   - Familiarise yourself with features like syntax highlighting, auto-completion, and error checking by creating a new file and experimenting with code.

3. **Create Three Files:**
   - Use Visual Studio Code to create three new files: **index.html**, **styles.css**, and **script.js**.

4. **Add Code Snippets to HTML File:**
   - In the **index.html** file, add a simple HTML code snippet, for example, a basic HTML structure.

5. **Install Live Server Extension:**
   - In Visual Studio Code, go to the Extensions view (you can use the shortcut **Ctrl+Shift+X** or **Cmd+Shift+X**).
   - Search for "Live Server" and install the extension provided by Ritwick Dey.

6. **Open HTML File with Live Server:**
   - Open the **index.html** file.
   - Right-click on the HTML file and select "Open with Live Server" from the context menu.
   - This will launch a local development server, and your default web browser will open, showing the rendered HTML page.

7. **Observe Real-time Updates:**
   - With Live Server running, any changes you make to the **index.html** file will automatically trigger a refresh in the browser, allowing you to see real-time updates.
