HTML5 Features Activities- Unit 2.4

Activity 1: E-commerce Website- Shopify

1. **Plan Website Structure:**
   a. Decide on the sections your e-commerce website will include (e.g., homepage, product catalogue, individual product pages, shopping cart, checkout, about us, contact).
   b. Sketch or wireframe the layout and design of each section to visualise the structure and content organisation.

2. **HTML Structure:**
   a. Write HTML code to create the basic layout of your e-commerce website, including structural elements like **<header>**, **<nav>**, **<main>**, **<section>**, **<footer>**, etc.
   b. Use semantic HTML tags to properly structure your content for accessibility.

3. **Content Population:**
   a. Populate each section with relevant content, such as product descriptions, images, prices, and other details.
   b. Utilise HTML text formatting tags (<h1>, <h2>, <p>, etc.) to emphasise key points and headings.
   c. Include product listings and descriptions using appropriate HTML elements and tags.

4. **Interactive Elements:**
   a. Incorporate interactive elements like buttons, dropdown menus, and navigation bars using HTML tags and attributes (<button>, <nav>, <ul>, <li>, etc.).
   b. Implement forms for user interactions, such as adding products to the cart, updating quantities, and completing the checkout process.

5. **Product Presentation:**
   a. Use lists (<ul>, <ol>, <li>) to categorise and display products effectively, allowing customers to browse by product type, price range, or other criteria.
   b. Include images and multimedia to showcase products from different angles or in use.

Activity 2: Blogging Platform - WordPress

1. **Plan Website Structure:**
   a. Decide on the sections your blogging platform will include (e.g., homepage, blog posts, categories/tags, author pages, about us, contact).
   b. Sketch or wireframe the layout and design of each section to visualise the structure and content organisation.

2. **HTML Structure:**

   a. Write HTML code to create the basic layout of your blogging platform, including structural elements like <header>, <nav>, <main>, <section>, <footer>, etc.
   b. Use semantic HTML tags to properly structure your content for accessibility.

3. **Content Population:**
   a. Populate each section with relevant content, such as blog post titles, excerpts, authors, publication dates, and categories/tags.
   b. Utilise HTML text formatting tags (<h1>, <h2>, <p>, etc.) to emphasise key points and headings.
   c. Include featured images and multimedia within blog posts using appropriate HTML elements and tags, such as <img> for images and <video> for videos.

4. **Interactive Elements:**
   a. Incorporate interactive elements like buttons, dropdown menus, and navigation bars using HTML tags and attributes (<button>, <nav>, <ul>, <li>, etc.).
   b. Implement forms for user interactions, such as commenting on blog posts and subscribing to newsletters.

5. **Post Presentation:**
   a. Use lists (<ul>, <ol>, <li>) to categorise and display blog posts effectively, allowing readers to browse by topic, author, or date.
   b. Include images, videos, and embedded content within blog posts to enhance engagement and illustrate concepts, utilising appropriate media tags like <img>, <video>, <audio>, etc.
