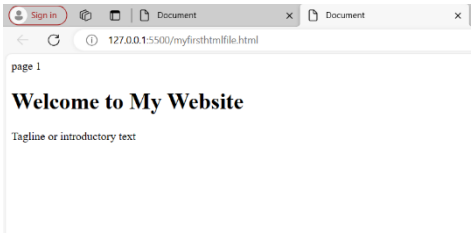
Semantic Tags

Semantic tags in HTML, are designed to provide additional meaning and context to the content they enclose. Here are some of the key semantic elements introduced in HTML5:

1. <header>
2. <nav>
3. <article>
4. <section>
5. <footer>
6. <figure>
7. <figcaption>
8. <detail>
9. <summary>

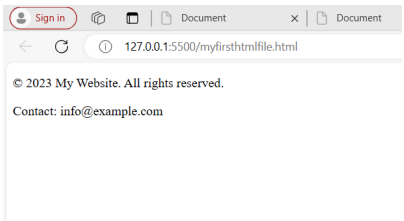
1. **<header> -** The `<header>` tag typically represents the introductory content of a section or a page, often containing headings, logos, navigation links, or other elements related to the overall content. It's not restricted to the top of the page but can be used within other sections as well.

HTML Code	Output

`<body>`
`  <header>`
`  page 1`
`  </header>`
`  <h1>Welcome to My Website</h1>`
`  <p>Tagline or introductory text</p>`
`</body>`
	


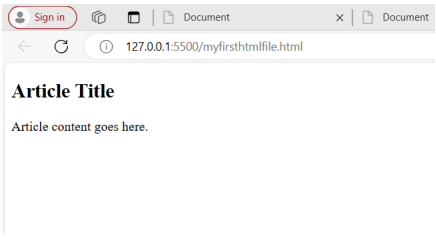
2. **<footer>-** The `<footer>` tag typically represents the footer of a section or a page, containing information such as copyright notices, contact details, or links to related pages.

HTML Code	Output

`<body>`
`  <footer>`
`  <p>© 2023 My Website. All rights reserved.</p>`
`  <p>Contact:info@example.com</p>`
`  </footer>`
`</body>`
	


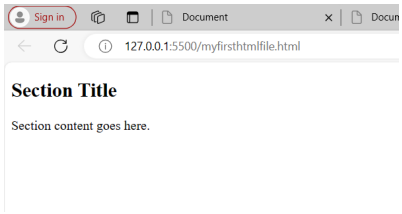
3. **<article>:** The `<article>` tag is used to define a self-contained piece of content that could be distributed and reused independently, such as a news article, blog post, or forum post.

HTML Code	Output

`<body>`
`  <article>`
`  <h2>Article Title</h2>`
`  <p>Article content goes here.</p>`
`  </article>`
`</body>`
	


4. **<section>-** The `<section>` tag defines a thematic grouping of content. It's a versatile element that can be used to group related content together.

HTML Code	Output

`<body>`
`  <section>`
`  <h2>Section Title</h2>`
`  <p>Section content goes here...</p>`
`  </section></body>`
	


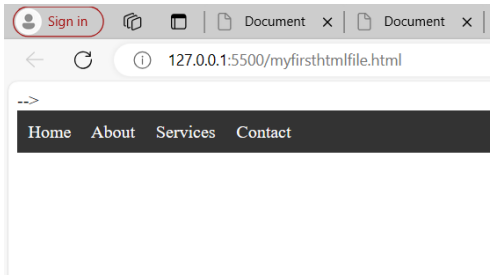
5. **<nav>-** The `<nav>` stands for navigation, and its use indicates that the content within it is intended for navigation purposes. Typically, it includes a list of navigation links, buttons, or other navigation-related elements within the <nav> element.

HTML Code

`<head>`
`  <title>Navigation Example</title>`
`  </head>`
`  <body>`
`  <nav>`
`  <ul>`
`  <li><a href="#home">Home</a></li>`
`  <li><a href="#about">About</a></li>`
`  <li><a href="#services">Services</a></li>`

```
        <li><a href="#contact">Contact</a></li>
      </ul>
    </nav>
    <!-- Rest of the page content goes here -->
  </body>
```

Output

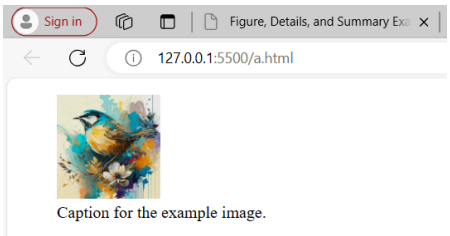


HTML code provides a simple structure for a web page with a navigation menu containing links to different sections of the page

6. **<figure> -** The <figure> element is used to encapsulate media content such as images, illustrations, videos, etc.

7. **<figcaption>-** The <figcaption> element provides a caption for the content within the <figure>.

HTML Code	Output

`<body>`
`  <!-- Figure Element -->`
`  <figure>`
`  <img src="abc1.webp" alt="An example image"width=100px; height=100px;>`
`  <figcaption>Caption for the example image.</figcaption>`
`  </figure>`
`</body>`
	


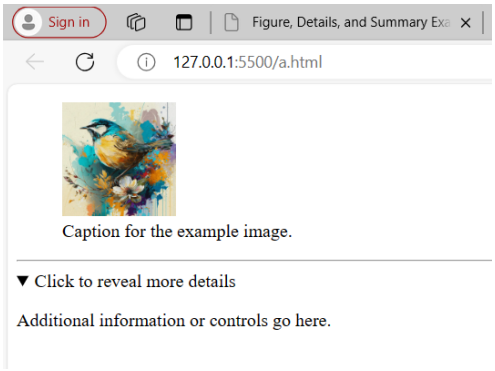
This code creates a figure element containing an image (abc1.webp) with specified dimensions and a caption describing the image.

- **<figure>**: This is an HTML5 element used to encapsulate a media object, such as an image, along with its caption or legend.

- **<img>**: This is an HTML element used to embed images in a web page. It has attributes:
  - **src**: Specifies the URL of the image file.
  - **alt**: Provides alternative text for the image, which is displayed if the image fails to load or for accessibility purposes.
  - **width** and **height**: Define the width and height of the image, respectively. These values are set to 100 pixels each in this example.
- **<figcaption>**: This is an HTML5 element used to define a caption or legend for a **<figure>** element. It provides a description or explanation of the content within the **<figure>** element.

8. **<details>** - The <details> element is used to create a disclosure widget from which the user can obtain additional information or controls.

9. **<summary> -**The <summary> element provides a visible heading for the <details> element.

HTML Code	Output


`<body>`
`  <!-- Figure Element -->`
`  <figure>`
`  <img src="abc1.webp" alt="An example image"width=100px; height=100px;>`
`  <figcaption>Caption for the example image.</figcaption>`
`  </figure>`
`  <hr>`
`  <!-- Details and Summary Elements -->`
`  <details>`
`  <summary>Click to reveal more details</summary>`
`  <p>Additional information or controls go here.</p>`
`  </details>`
`</body>`
