Web Dev Environment Activities - Unit 1.2

1. **Front-End Technologies**
   Identify principal front-end technologies employed in web development. Use various resources like online articles, tutorials, documentation and videos to gain an initial understanding of each technology.

   - **Share and Reflect**
     - **Write a short summary:** Reflect on your learning experience. What did you find easy or challenging? What surprised you?
     - **Share your findings:** Engage in discussions about your learning experience with peers, online forums, or social media platforms. This collaborative exchange can reinforce your understanding and provide fresh perspectives. Further explore the subject by delving into official documentation or community-created guides.

2. **Research and Comparison on Code Editors:**

   - Start by researching different code editors available in the market. Popular options include Visual Studio Code, Sublime Text, Atom, and JetBrains WebStorm.
   - Look into the features offered by each editor, such as syntax highlighting, code completion, debugging tools, and plugin support.
   - Make a list of pros and cons for each editor based on your requirements and preferences.
